PROJECT 1

PROJECT TITLE : Food-cycled

MOTIVATION:

Project idea was taken from the Enactus list of projects – ‘40% of food in the US goes to waste. This is a new project focused around reducing food waste in KC. Currently, we are working with Second Servings to increase the amount of food that is picked up and repurposed’. This inspired us to take a step forward to initiate this project which will be very helpful.

OBJECTIVE:

The key idea is to gather and provide food for homeless or less privileged people and to reduce the wastage of food.

DESCRIPTION:

Here, an android application will be developed initially, volunteers will be registering in the app and sponsors will have an account in it. So, people have excess food will send requests in the application and volunteers who are present in the nearby area can access the sponsors location will accept the request and collect the food. The collected food will be placed in some stalls where homeless people are able to collect the food. In addition to that we will create a website to post the feedback for the volunteers and appreciation for customers. In this website, we can share the locations of stalls also.

FEATURES:

- stall locations using maps

PROJECT 2

PROJECT TITLE : Pan2Plate

MOTIVATION

Based on our experience, finding restaurants that serve authentic food has been difficult. All restaurants from different cuisines serve Americanized food. The application developed for this project would help those who look for authentic food.

OBJECTIVE

Designing an application for people who are passionate about having affordable authentic food .

DESCRIPTION

In this project, we design an application where user needs to create an account and provide inputs such as cuisine, spice levels, cost, delivery or carry out, distance. Also, people who are an expert in cooking, creates a profile for themselves. List of options based on user's requirements is provided and user makes a selection based on the ratings of the chefs. After this user will be able to chat with the chef and finalize on the cost and delivery or carryout options. Users are allowed to give feedback and rating for the chef.

FEATURES

- Chat feature between user and chef
- Maps to sort chefs nearby to the user
- Ratings for Chef

PROJECT 3

PROJECT TITLE : Travel Smart

MOTIVATION :

Travelling around always turns out to be expensive. But with a little imagination you can travel to amazing destinations without breaking your budget.

OBJECTIVE :

Designing an application which suggests travel plans to its users.

DESCRIPTION :

In this project, we design an application in which the user creates a travel profile where he provides his interests, travel period and budget . User is provided with two types of suggestions based on his profile - travel and accommodation, and the other with travel , accommodation and activities . This project helps people to get an idea of the approximate value their travel would cost for the chosen number of travel days. Peak seasons are taken into consideration.

UNIQUENESS :

Websites like Tripadvisor, provide options for accommodation , things to do , travel ,etc. after the user inputs the name of the place . But through this project, user is given options of places to visit based on their profile. User then selects their preferred destination. FEATURES :

- Feedback from previous travelers
